```
The specification describes SENP1 and SENP2 polypeptides. The SENP1 gene is found in chromosome 12q13.1. SENP1 is found in the nucleolus, and SENP3 is found in the nucleolus, and SENP3 is found in the nucleolus, and SENP3 is found in both locations. SENP polypeptides are sentron-specific proteases that remove sentrin from some sentrinised peptides, but do not affect proteins modified by ubiquitin or NEDDBS. SENP polypeptides are used to identify specific modulators of SENP. These modulators are potential anti-proliferative and anti-viral agents such as herpes simplex-1 or cytomegalovirus. SENP polypeptides are used for studying the role of sentrinisation in development of acute promyelocytic leukaemia. Fragments of SENP polypedides are used as hybridisation probes and amplification prologoral function of PML, a tumour suppressor implicated in development of acute promyelocytic leukaemia. Fragments of SENP polypucided as nybridisation probes and amplification primers for detecting gene expression or preparing mutated sequences, also as antisense sequences for inhibiting SENP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540

```
invention relates to human nucleic acids (AAI57798-AAI61369) and encoded polypeptides (AAM38642-AAM42213) with nootropic, acids may expect acitivity. The polymucleotides are useful some therapy. A composition containing a polypeptide or polymucleotide in invention may be used to treat diseases of the peripheral nervous injuries, peripheral nervous sized neuropathies and central nervous system diseases, such as alised neuropathies and central nervous system diseases, such as leadiner's, Parkinson's disease, Huntington's disease, amyotrophic real sclerosis, and Shy-brager Syndrome. Other uses include the lisation of the activity, chemotactic/chemokinetic activity, haemostatic thromholytic activity, cancer diagnosis and therapy, drug screening, thromholytic activity, arthritis and inflammation, leukaemias and
nootropic; immunosuppressant; cytostatic; gene therapy; cancer; ral nervous system; neuropathy; central nervous system; CNS; er's; Parkinson's disease; Huntington's disease; haemostatic; phic lateral sclerosis; Shy-Drager Syndrome; chemotactic; netic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Wang D;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ucleic acids and polypeptides, useful for treating disorders central nervous system injuries \boldsymbol{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ren F, War

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel human secreted proteins which are encoded by polynucleotides obtained from fetal brain, adult skin, adult brain, adult thymus and adult acrta cDNA libraries. The colling and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, hematopolesis regulating cettivity, tassue growth activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumor invasion suppressor activity, and tumor inhibition activity. The polynucleotides are also stated to be useful for gene therapy.

AA243777-243808 represent the polynucleotides described in the invention which encode the proteins represented in AAV50905-V50947.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3

                                                                                                                                                                                                                                                                                                                               the encoded polypeptides (AAMS642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S. discontains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

AARD05492-AAD05564 represent cDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode. CC AAE0174 AAE01163 represent human secreted protein fragments or variants. CT he secreted proteins and their genes are useful for preventing, treating corrected proteins and their genes useful for preventing, treating corrected proteins can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 22 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune CC diseases (e.g., rheumanatoid arthritis), inflammation, allergies, neurological disorders schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, and giogenic disorders, indiapered disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell
                   angiogenic disorder; kidney disorder; gastrointestinal disorder; allergy; pregnancy-related disorder; endocrine disorder; infection; wound healing; cell culture; chemotaxis; vulnerary; binding partner identification;

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polyucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen.

The combinant vectors and host cells comprising human ovarian antigen of ovarian antigens and polyucleotides and polypeptides in diagnosing.

The ating, prognosing or preventing various ovary and/or breast-related alsorders such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, coplycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), chlood-related disorders (e.g., anaemia), cardiovascular disorders, and uniany system disorders, neurological disorders, gastrointestinal disorders and uniany system disorders, ovarian antigen polypeptides and polyputcleotides may also be used in screening for compounds which modulate varian antigen perpension or activity, The polynucleotides may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10;

protein genes, and AAE01672-AAE01743 represent the proteins they encode.

protein genes, and AAE01672-AAE01743 represent the proteins they encode.

AAE01744-AAE0163 represent human secreted protein fragments or variants.

The secreted proteins and their genes are useful for preventing.

The secreted proteins and their genes are useful for preventing.

The secreted proteins and their genes are useful for preventing.

The secreted protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the amount of the new genes. Specific uses are described for each of the mount of the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental aborders, cancer, tumours, foetal and developmental aborders, and include daveloping products for the diagnosis or treatment of aborders, and sacratic disorders (e.g., Alzheimer's disease, Parkinson's diseases), cognitive disorders, disbetes, atherosclerosis, skin disorders, and infections. The proteins can also be used to aid wound the land organs before transplantation, for supporting cell culture of primary tissues, to respendent tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used to a brith-dise sensific for a protein of the honeauxis, and can be used to a brith-dise sensific for the modify storage properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The polynucleotide sequences given in AAC59566 to AAC59614 encode the human secreted proteins given in AAB3429 to AAB3437. AAB34348 to AAB34437 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Example of activities include: neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaccological; and antibacterial. The polynucleotides can be used for the detection of various disorders such as cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The secreted proteins can be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AMD05492-AAD05564 represent CDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode. Drotein genes, and AAE01672-AAE01743 represent the protein step encode. CC AAE01743 represent the protein fragments or variants. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing the camount of the new protein in a sample or by determining the presence of muntations in the new genes. Specific uses are described for each of the camount of the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions and infections, for the disorders of the immune system, allorgies, neurological disorders (e.g., rheumatoid arthritis), inflammation, allorgies, neurological disorders (e.g., rheumatoid arthritis), inflammation, allorgies, neurological disorders (e.g., rheumatoid arthritis), inflammation, cardiovascular disorders, programicy schizorders, schizophrenia, asthma, skin disorders, organitive disorders, schizophrenia, asthma, cardiovascular disorders, programicy related disorders, endocrine cardiovascular disorders, programory related disorders, endocrine cardiovascular disorders, programory related disorders, endocrine culture of primary tissues, to regenerate tissues, to identify their cognitive of primary tissues, to regenerate tissues, to identify their cognitive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in companion of the invention endocribed by and intention of the invention of beaution of processervative to modify storage properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human

                                                                                                                                   The present invention describes a DNA construct comprising a transcriptional regulatory sequence linked to the gene of interest wher the regulatory sequence linked to the gene of interest wher the regulatory sequence is the human eukaryotic initiation factor 4A1 (eIF4A1) gene promoter. This can be used in the production of DNA vaccines and gene therapy, both of which can be used in the prevention and treatment of diseases such as cystic fibrosis, parkinson's disease, cancer, hepatitis B and C, HIV, tuberculosis, HPV, HSV, multiple sclerosis, Alzheimer's disease and asthma. It can also be used in
                                                                                                                                                                                                                                                                                                                    1427 CAGTACTGCAAGCATCTGGCCCTGTCTCAGCCATTCAGCTTCACCCAGCAGGACATGCCC 1486

The invention relates to novel genes (AA193926-AA197963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy an susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   756
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    632

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of ovarian cancer. The compositions comprise one or more ovarian tumour the proteins, their associated polynuclectides, or immunogenic portions of the proteins. The ovariant tumour polynucleotides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumour protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumour DNA or protein by incubating isolated T-cells allowing them to proliferate, and administering to the patient. The sequences can be used as markers for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutuant species and for preparing other genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549

                              The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for N-myc and TrkA genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  996 GGACCTIGIAIGGACAGAACIGGCICAAIGACCAGGIGAIGAACAIGIAIGGAGACCIGG 1055

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 8, Algorian Sequence 8, Algorian Sequence 8, Algorian Sequence 8, Algorian Sequence 17, Algorian Sequ

APPLICANT: Cramer, Carole L.

APPLICANT: Cramer, Deborah L.

APPLICANT: Weissenborn, Deborah L.

TITLE OF INVENTION: HMG2 PROMOTER EXPRESSION SYSTEM AND

TITLE OF INVENTION: POST-HARVEST PRODUCTION OF GENE PRODUCTS

TITLE OF INVENTION: IN PLANTS AND PLANT CELL CULTURES

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 4, Application US/08282581
Patent No. 5670349
GENERAL INFORMATION:
APPLICANT: Cramer, Carole L.
APPLICANT: Weissenborn, Deborah L.
APPLICANT: Weissenborn, Deborah L.
TITLE OF INVENTION: HOG2 PROMOTER EXPRESSION SYSTEM AND
TITLE OF INVENTION: POST-HARVEST PRODUCTION OF GENE PRODUCTS
WINDOW OF GENERAL OF THE PRODUCT OF THE PROD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 1890;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TITLE OF INVENTION: PROCEDURES AND REGULATORY DNA SEQUENCES; FOR GENETICALLY ENGINEERING DISEASE RESISTANCE AND OTHER INDUCTBLE TRAITS IN PLANTS; NUMBER OF SEQUENCES: 9

UT-E-DW0 is a cDNA library containing the following
tissue(s): lens. The library was constructed according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996 First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT/T3-Pac vector. The
oligonaclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
